Hi Katrina – attached are maps showing the completed borings. I have reviewed the VOC data at these locations and it appears that none (I am verifying) of the detects are above the PSLs so we can discuss the need/frequency to sample for VOCs going forward.

I will let the driller know it will be after March.

Thank you

Pat

Subject: Maps of completed boring locations

Pat, in preparation for the next field event, will you please revise the soil boring figures to show which ones have been completed. This will help us plan the next round and will also assist us when looking at the data results to determine if there are locations where the analytical parameters might be adjusted.

In addition, there is a well north of the site, north of 44-toll road that we should include as a background well. We should plan to sample this well for all parameters as we did for the residential wells.

Plugging GW-10 will need to be scheduled during our next field event. I indicated to the defendant's attorneys that we will plug it after March. Given that we have rescheduled, we might as well just plan for the activity while we are out there rather than making a special trip just to plug the well.

thanks

Katrina Higgins-Coltrain
